

Type of testing	Test
Functional testing	Click on the "Buy" button on any product and check that the "Basket" window opens
API testing	Enter valid data in the form of a payment card and pay for the selected product through the bank payment system
Load testing	Check that the response time of the site with N-number of users per second who add products at the same time to the cart corresponds to the specified time in the requirements
Stress testing	Check that the number of users per second who simultaneously add products to the cart corresponds to the specified number in the requirements
UI testing	Add any product to the cart and check that the number of added products and the price in a certain size and font are displayed in the site header on the cart icon
Usability testing	Check that adding the product to the cart can be remembered after the first time using the site
Configuration(Compatibility) testing	Click on the "Buy" button on any product on the site through all browsers
Localizatin testing	Click to change language on the "Cat food" page
Re-testing(Confirmation) testing	Recheck that the "Cheapest First" sort sort from lowest to highest price on the Cat Food page after a bug fix
Smoke testing	Try to buy, find the product, register, view the product by category, and find other information for the buyer after the bug is fixed
Regression testing	Recheck that you can complete and pay for the order after the bug is fixed
Accesability testing	Click on the "Sign Language Interpreter Center" button in the profile header to open a help page with an available "Ear" widget, where you can enter valid data and check the consultation order
Ad-hoc testing	Enter any data in the order form
Parallel testing	Check the product filters on the cat and dog food pages
Negative testing	Enter invalid data in the fields when placing an order
Positive testing	Enter valid data in the fields when placing an order
End-to-end testing	Go to the website https://masterzoo.ua/ , go to the "Cats" category, go to the "Cat food" subcategory, click the "Buy" button on any product, the "Checkout" button should appear in the open "Basket" window order, "Back to shopping", "Log in" and "Promo code" and a line with offers for other products. Press the button "Make an order", enter valid data, pay online and check the product order
Portability testing	Check that you can change the site architecture while keeping the same database
Internationalization testing	Check that you can add other languages to globalize the site
Security testing	Check that the buyer's data is not available to other buyers
